BoatTracker

Your TK905 setup checklist

Keep aboard | Design preview | 3 November 2026

01 **Check your kit.** Tracker, charging lead, optional hardwire kit and quick-start card. Your SIM is included, fitted and set up for you.

02 **Power before placement.** Follow the exact supplied instructions. Charge time, battery days and light patterns are to be confirmed in testing.

03 **Claim securely.** Use your own account and purchased-kit claim. Check the boat and device match. Keep claim details private.

04 **Choose fitting points.** Try accessible, dry positions with practical sky visibility. On steel boats, test before fixing anything permanently.

05 **Test this spot.** With the cabin normally closed, check a new contact and fresh position for the correct tracker. A recent connection alone is not a pass.

06 **Compare two or three places.** Use the same conditions. A fresh report is a useful observation, not a guarantee of future reception.

07 **Agree a power routine.** Plan charging access. For hardwiring, ask a competent marine electrician about supply, fuse, isolation and low-voltage protection.

08 **Prove your alerts.** Review the map and radius, verify each named recipient and confirm an actual test delivery.

09 **After moving.** Check a fresh fix, review your new mooring boundary, then confirm. Marina sharing is optional and separate.

10 **If something fails.** Keep report times and completed checks together. Use the troubleshooting guide, then the support route.

Boat / tracker reference: _____

Chosen spot / contact time / position time: _____

Recipient delivery checks: _____
